

Benefits of window film.

- Reduced summer heat, up to 84%
- Insulates in the winter, up to 34%
- Protects furnishings from fading.
- Makes glass shatter resistant
- Lifetime warranty on film
- 2-5 yr warranty against glass breakage / seal failure

Why film rather than sunscreens?

- Film rejects as much or more heat and U.V. light regardless of sun's angle.
- And does not have to go as dark to cool the house.
- Clear, undistorted view.
- Easy to clean.
- Recommended over sunscreens by APS

Is film safe for dual pane glass?

Yes!

Dark "car" films can attract heat to the glass which could be harmful,

But the selected films that we offer have been designed for dual pane and low e windows.

My windows were tinted from the factory...

Many homes come with a slight factory "dye" in the glass.

- "Dye" is only good for glare reduction and is not efficient in rejecting heat.
- Factory tinted windows don't offer much U.V. protection and will still allow furnishings to fade.
- APS says that factory tinted windows will reduce cooling bills by about 26%, Compared to a strong window film that would save them about 44%. (film applied on top of factory tint should save them over 50%)

Does, tint work on low e windows?

Yes!

- Low e was designed for cold weather climates and primarily helps to keep heat IN rather than OUT
- Window film will not harm low e windows and will improve the efficiency.

Why are Madico & SunTek better than other brands?

- They are very comparable to other conventional films, but They have an adhesive system that is very much like "super glue" that dries hard rather than the typical "sticky" adhesives that may eventually bubble up.
- They have a superior scratch resistant coating that holds up well under normal cleaning conditions.
- They use very high grade metals which allow them to hold out a little more heat than the competition without having to go as dark.
- Madico has been in business since 1903 And NASA uses their products for heat shielding around many components on their spacecraft including the space shuttle.
