\*Does NOT include SRS-220-BFXSR

## FILM DRY OUT TIME

The mounting solution used during the installation of your Madico window films may require a period of time to dry out. Cold and/or cloudy weather conditions can lengthen the dry out time of a film, while warm weather and direct sun light exposure will shorten the dry out time. Small water beads and a slightly cloudy look may appear during the dry out period. If slow drying does occur, do not become alarmed, it is a part of the natural curing process.

## WINDOW FILM CARE & MAINTENANCE

To obtain maximum service life from your window film, note the following instructions for proper care and maintenance. **DO NOT CLEAN THE FILM FOR 30 DAYS AFTER INSTALLATION.** This will help secure proper curing of the adhesive system to the glass. Do not use bristle brushes, abrasive scrubbing sponges or any other cleaning materials that could scratch the film. Always use fresh clean soft materials to wash and dry your windows. Do not use solutions that contain abrasive materials. Common cleaning solutions such as Windex® and other window cleaners may be safely used to clean your windows.

\*Windex is a registered trademark of SC Johnson.
